

# Acryflash® - the safe industry heavy weight!

Acryflash® is the new roof flashing from Consolidated Alloys. Previously known as Acrylead®, new Acryflash® is fully compliant with the Australian Drinking Water Standards AS/NZ 4020:2005 "off the shelf".

Manufactured in Melbourne Australia, Consolidated Alloys has been supplying the leading coated lead flashing in the Australian Market for over 19 years. After undergoing extensive modification, trialing and testing during 2008, the results of Acryflash® are extremely significant.

Acryflash® is certified for use "off the shelf" in potable / drinking water applications such as flashings on roofs used as catchments for rainwater tanks.

Acryflash® is now the most cost effective roof flashing available on the Australian market, following a number of reductions in material costs.

## More than an accepted standard, it's the safe industry heavy weight... and environmentally friendly!

Ever mindful of the environment, Consolidated Alloys has developed a unique baked acrylic primer coated lead sheet. The primer coating is applied to the whole sheet surface area, including all edges, preventing the contact of water with the lead and its oxides, which prevents the run off potential of lead entering water tanks and into ground water systems. The thermo backing process ensures the primer coating is bonded to the lead sheet substrate.

### Aesthetically Pleasing

Acryflash® allows you to improve the look of exposed flashing by finish coating to match the roof or surrounding material. Acryflash® has a primer coating and will withstand the elements in its own right. It can be top coated using a conventional acrylic house paint to improve the appearance of your flashing and to maximise the protection that Acryflash® provides.

### Quality Standards

Acryflash® conforms to AS1804-1976 and is available in 15 and 20 Kg./m<sup>2</sup> mass.

**Acryflash® is now fully compliant with Australian Drinking Water Standards AS/ NZ 4020:2005.**
